Interview Question – Find geolocation information about an IP

For this question, the main objective is to write a program that finds geolocation information about an IP. This programming assignment is nice, because it is practical, and could indeed be something that happens in the workplace.

The requirements are listed below:

The program will ask for an IP as input from a user. Now use the API of http://ip-api.com and find geolocation information about it. Return the city, region name and country as the following output: city, region name (country).

Sample Input

63.70.164.200
168.12.13.1

Sample Output

Lincoln (Highlands), Nebraska (United States)
Atlanta (150), Georgia (United States)
